

AI-native production for scalable storytelling

Vertical shorts, long-form, remastering, localization, and brand-integrated IP — managed through our internal production app.

THE EXPANDED OFFER

From short-form tests to full franchise engines.

We are not only generating videos. We are building repeatable media systems: characters, worlds, workflows, teams, and release calendars that can keep producing.

01

Vertical shorts

Fast audience testing, hooks, formats, and seasonal drops.

02

Long-form production

Series, specials, films, and game cinematics with consistent characters.

03

Production OS

Our app coordinates scripts, shots, assets, feedback, and IP development.

WHO WE ARE

A production and technology company for AI-native media.

Led by senior creatives from Blizzard, Nickelodeon, and large-scale media.

We combine production experience with AI-native infrastructure.

We operate at the intersection of storytelling, production, and technology.

WHAT WE DO

We deliver AI-native production services using our proprietary production system.

Films, series, IP development, game cinematics, branded content.

End-to-end production: creative development, visual generation, review, polish, localization, and delivery.

Team workflow is managed directly inside our internal production app.

HYBRID PRODUCTION MODEL

Human vision. AI execution.
Production control stays human.

Humans define story, characters, environments, performance, and emotion.

Our software translates creative intent into scalable visual production.

The result is faster iteration without losing authorship or taste.

PHATTY APP

Our internal app manages teams and develops IP.

A production command layer for AI-native media teams.

StoryForge OS

Worlds, characters, scripts, tone, and franchise rules in one place.

Scene Command

Shot briefs, references, camera notes, assets, and approvals.

IP Codex

Canonical character/world memory so every output stays consistent.

Launch Calendar

Shorts, campaigns, seasonal beats, localization, and drops.

FANCY APP LAYERS

Names that make the platform feel ownable.

Phatty App

The production hub.

StoryForge OS

The creative operating system.

IP Codex

The franchise memory layer.

Scene Command

The shot and review system.

World Builder

The 3D / scene exploration layer.

Brand Layer

Seasonal product placement and sponsor integration.

PRODUCTION TOOLKIT

Script markup, 3D scene exploration, live team visibility.

Tag emotion, shots, camera, and performance directly from the script.

Explore scenes in 3D and capture any angle before final generation.

Track progress live so creative, production, and partners stay aligned without meeting overload.

VERTICAL SHORTS → LONG FORM

Use shorts as the market signal. Build long-form from what works.

Test

Release character moments, jokes, action beats, trailers, and seasonal hooks.

Learn

See which characters, formats, looks, and story engines create traction.

Scale

Turn winning shorts into episodes, specials, films, branded arcs, or games.

TIME + COST BENEFITS

AI-native workflows compress production without removing taste.

Faster iteration

Multiple looks, camera ideas, and edits can be explored before locking a path.

Lower previsualization cost

Concept, look-dev, animatics, and test shots happen earlier and cheaper.

Reusable IP assets

Characters, worlds, prompts, references, and rules become a compounding library.

Smaller core team

Senior creative direction plus AI-native operators can cover more ground.

REMASTERING

Existing assets can be upgraded into new formats and new audiences.

Visual remastering for older footage, characters, scenes, and branded assets.

Modern trailers, social cuts, pitch clips, and cinematic refreshes from existing material.

IP revival without starting from zero.

LOCALIZATION

Global versions without rebuilding the whole production.

Localized language, captions, voice, cultural references, and regional campaign edits.

Format adaptation for TikTok, Reels, YouTube Shorts, YouTube, FAST channels, and streaming pitches.

One IP engine can generate many regional expressions.

SEASONAL PRODUCT PLACEMENT

Brand integrations can become story events, not interruptive ads.

Seasonal drops

Halloween, Christmas, summer, back-to-school, sports finals, launches.

Product moments

Objects, locations, costumes, rituals, props, and character behavior.

Campaign variants

Localized short-form packs, long-form inserts, and social cutdowns.

Measurement loop

Test creative on shorts before scaling to bigger placements.

CASE STUDY FORMAT

Each case study should prove one production advantage.

Case 01

Vertical short campaign → long-form development.

Case 02

Legacy asset → AI remaster + new trailer package.

Case 03

One scene → localized versions for multiple markets.

Case 04

Seasonal product placement → character-led story beat.

Use real client/project names only where cleared. Otherwise present as internal production examples.

LOOK + FEEL EXAMPLES

One production engine. Many visual languages.

Premium cinematic fantasy

Soft contrast, practical light, grounded magic, emotional closeups.

Stylized family adventure

Readable silhouettes, expressive characters, colorful action, franchise-friendly.

Gothic thriller

Low-key lighting, realistic texture, tension, restrained camera movement.

Brand-world comedy

Fast hooks, clean product readability, character-driven humor, vertical-first framing.

HOW WE PARTNER

Three ways to work with Phatty Acid.

Pilot Sprint

2–4 weeks. Look-dev, shorts, workflow test, production plan.

Campaign Engine

Monthly vertical shorts, seasonal drops, localization, brand integrations.

Long-form Build

Series / film / special development with IP bible, pipeline, and production team.

NEXT STEP

Work with us to create modern media
production at scale.
